Re: Southeast Rockford Groundwater NPL Site
Monitoring Results – Sampling Event # 16

Dear Mr. Doterrer:

Thank you for submitting the results from the May-June 2006 sampling event conducted on behalf of your client, the City of Rockford, via cover letter dated December 6, 2006. In addition to the cover letter, the report also included Table 1, Table 2, and Appendix A concerning laboratory data sheets.

As the cover letter notes, "...The analytical results for the chemicals of concern identified in the Site Record of Decision are summarized in Table 1...".

In examining the results in Appendix A, I note that for laboratory sample ID 247435-12, for monitoring well MW113B, sample date 6/23/2006, vinyl chloride results are put at 11 ug/l. For laboratory sample ID 246451-11, for monitoring well MW124, sample date 5/06/2006, vinyl chloride results are put at 61 ug/l. For laboratory sample ID 246451-20, for monitoring well MW113B, sample date 5/08/2006, vinyl chloride results are put at 9.2 ug/l.

Given the fact that we have a dynamic situation in the SE Rockford aquifer, and that the mix of contaminants may change with time as degradation proceeds, and given that vinyl chloride presents known carcinogenic challenges through both the ingestion and inhalation pathways, I believe that in the future Table 1 should make note of positive vinyl chloride findings when concentrations occur above the MCL of 2 ug/l. I am hopeful that both NES, Inc., and your client would agree that VC should be considered as a "chemical of concern" at the site.

Thank you for your consideration of this matter.

Yours truly,

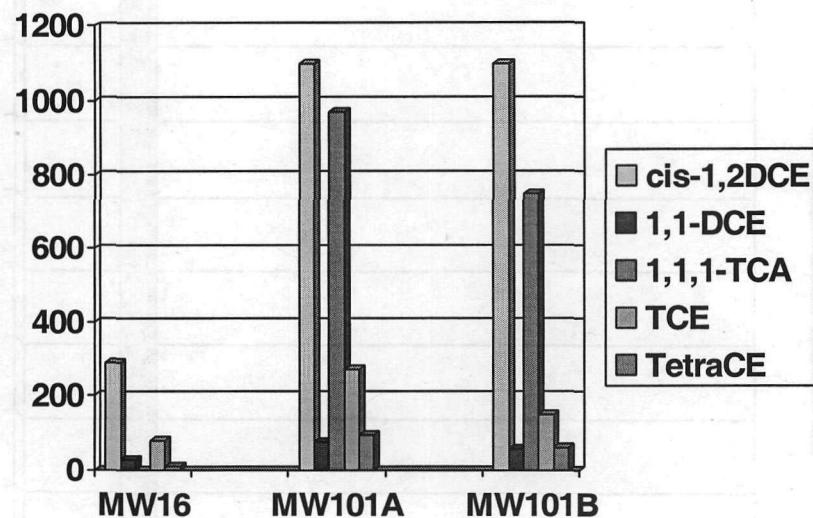

Russell D. Hart, RPM

**RE: Southeast Rockford Ground Water NPL Site
Groundwater Monitoring Results-Semi-Annual Sampling Event #16**

Mr. Hart / Mr. Williams:

I am providing the analytical results for the groundwater monitoring samples collected at the Southeast Rockford Groundwater Contamination Site (the Site) during the semi-annual monitoring event conducted during May-June, 2006. This sampling event constitutes the 10th semi-annual sampling event and 16th sampling event overall under the long-term groundwater monitoring element of the remedy established under the RD/RA Work Plan.

The sample collection and analytical work were completed in accordance with the Site Field Sampling Plan and amended RD/RA Quality Assurance Project Plan (QAPP). The sample preparation and analysis work was performed by Severn Trent Laboratories, Inc. of Chicago, consistent with US EPA CLP procedures. The analytical results were validated by Anderson & Egan, Co.

The analytical results for the chemicals of concern identified in the Site Record of Decision are summarized in Table 1. The historical analytical results for samples collected from the Site groundwater monitoring network by monitoring well location are presented in Table 2. The validated laboratory data sheets and data quality summaries are provided in Appendix A.

The VOC concentrations for the Site chemicals of concern are summed in Table 2, as total VOCs, and reveal general trends in VOC concentrations at each monitoring location. In brief, the historical data for total VOCs indicates the following trends are occurring at the Site:

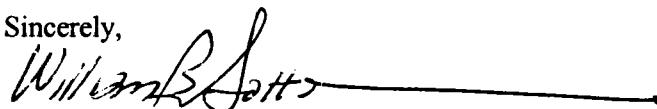

- Total VOC concentrations have generally decreased across the Site since inception of the long-term monitoring program in the 2nd quarter 1999, with the exception of monitoring locations located immediately downgradient of identified source areas;
- Natural attenuation of affected groundwater appears to be occurring across the Site based on the ratios of parent VOC compound concentrations with associated breakdown product concentrations.
- Total VOCs in ground water monitoring locations in the vicinity of source Area 7 were higher than the prior sampling event in October 2005, notably at MW101A, MW101B, MW101D, and MW113A, and MW113B.

SE Rockford NPL Site
Groundwater Monitoring Results-Sampling Event #16
Page 2

- Total VOCs in ground water monitoring locations in the vicinity of source Area 9-10 were moderately higher than the prior sampling event in October 2005 at MW124 and MW201.
- Total VOCs in ground water monitoring locations in the vicinity of source Area 4 and Area 11 were relatively constant or lower than the prior sampling event in October 2005.
- Total VOC concentrations at monitoring locations proximate to the Rock River are generally constant or decreasing with the exception of MW-206C;
- No sample was collected from MW 101C during the recent sampling event due to ongoing access issues at the location. The NES field representative has been in contact with Tom Williams, IEPA regarding resolution of the access issue.

Please contact me at telephone 303-232-2134 if you have any questions regarding the information provided or require any additional information.

Sincerely,

William B. Dotterer,
Sr. Project Manager

DATA QUALITY CONTROL CRITERIA REVIEW SUMMARY

SUMMARY COMMENTS

1. INITIAL CALIBRATION

The Relative Response Factor (RRF) for Acetone; 2-Butanone; 2-Hexanone; and 1,2-Dibromo-3-chloropropane was less than the 0.05 limit. Positive results were labeled as an estimate ("J"); non detected results were rejected "R".

2. CONTINUING CALIBRATION

The Relative Response Factor (RRF) for Acetone; 2-Butanone; 2-Hexanone; and 1,2-Dibromo-3-chloropropane was less than the 0.05 limit. The Samples were previously quantified in the initial calibration.

3. FIELD QC RESULTS

FD-2 is the blind duplicate of MW101B. The results are within range.

STL Chicago is part of Severn Trent Laboratories, Inc.

The analytical data were reviewed in accordance with the analytical methods and the Environmental Protection Agency (EPA) Contract Laboratory Program (CLP) National Functional Guidelines. The review included checking quality control (QC) values provided on the laboratory QC forms to method QC criteria. Review of the raw data was not performed.

DATA QUALITY CONTROL CRITERIA REVIEW SUMMARY

SUMMARY COMMENTS

1. INITIAL CALIBRATION

The Relative Response Factor (RRF) for Acetone; 2-Butanone; 2-Hexanone; and 1,2-Dibromo-3-chloropropane was less than the 0.05 limit. Positive results were labeled as an estimate ("J"); non detected results were rejected "R".

2. CONTINUING CALIBRATION

The Relative Response Factor (RRF) for Acetone; 2-Butanone; 2-Hexanone; and 1,2-Dibromo-3-chloropropane was less than the 0.05 limit. The Samples were previously quantified in the initial calibration.

3. FIELD QC RESULTS

FD-1 is the blind duplicate of MW113A. The results are within range.
